

## PROFILE

I am a React developer. I have been learning programming for +4 years. Since 2019 I have been developing and testing web apps with the hope of finding the right area of expertise that suits my taste and skills. After this deep dive of learning the depth of various languages and technologies I came to the conclusion that the front side of web development, especially JavaScript and its libraries is the most suitable area for me. I write clean codes and leverage my knowledge about JavaScript, HTML, CSS and work closely with testers, designers, web designers, and project managers to create robust and effective applications. I Build solutions that can adhere to a larger audience, increasing scalability.
